

Website Requirements

Project: DataverseNO Information Website Redesign

Website: <https://info.dataverse.no/>

Document version: 1.1

Date: 26.06.2026

Contributors: Philipp and Rieke

Versions:

- Version 1.0: Based on a merged template suggestion from Copilot + ChatGPT according to the [prompt](#) made on June 25th, 2026 (June 26th, 2026)
- Version 1.1: Rieke/Philipp commented and filled gaps and content (June 30th 2026)
- Version 1.2: Rieke/Philipp commented and filled gaps and content (July 1st 2026)

1. Project Overview

1.1 Background

The DataverseNO information website (<https://info.dataverse.no/>) provides information and documentation about the DataverseNO repository (<https://dataverse.no/>).

The main content types of the DataverseNO information website are:

- Repository guides:
 - Deposit guidelines
 - Curation guidelines
 - Collection and repository management guidelines
- Information about DataverseNO
- Contact information
- News/blog content

The primary target groups are:

- **Depositors (researchers):** Researchers who need guidance on preparing and submitting datasets. Typical needs:
 - Understand deposit requirements
 - Follow clear workflows

- Find practical instructions quickly
- **Repository staff:** Curators, Collection managers and Repository managers. Typical needs:
 - Access detailed procedures
 - Maintain consistent workflows
 - Manage repository-related documentation

1.2 Purpose

Describe the purpose of redesigning the DataverseNO information website (<https://info.dataverse.no/>).

The redesign should focus on:

- Improved usability and user experience
- Better organization and discoverability of repository documentation
- Improved functionality for content management[RM1]
- Sustainable technical solution for future maintenance[RM2]
- A platform suitable for internal development and AI-assisted maintenance
- Support for bilingual content management

2 User Journeys

2.1 User Journey: Depositor

User Journey: Depositor (step 1)

Goal: Understand if DataverseNO is a solution for me / Motivation to share data

Pain points in current solution (DataverseNO information website):

The most pertinent information is not easily available, e.g.:

- What is meant by “open research data”/“shared openly”?
- Can anyone share their data on DataverseNO?
- Does it cost me anything?
- I need restricted access – is this offered?
- Does sharing my data here meet requirements for EU funded projects.
- What are the advantages to using Dataverse compared to other solutions
- If DataverseNO is not suitable for me – what alternative solution should I use?

User Journey: Depositor (step 2)

Goal: Prepare and deposit dataset in the DataverseNO repository

Pain points in current solution (DataverseNO information website):

- Too many clicks to find the relevant information
- Hard to orient yourself on the page
- The website feels overwhelming for new users
- No summary of the information
- Collapsed information is not searchable
- Search box does not take the user to the relevant information
- Where is the login button for the DataverseNO repository?
- Lacking explanation of the concept of curation (it comes across as intimidating)
- Lacking information about licenses for software/code
- Hard to understand the workflow of the DataverseNO repository
- Hard to get to the relevant section when searching in Google or similar search engines

2.2 User Journey: Repository staff (Curator)

Goal: How to evaluate the dataset at hand

Pain points:

- Hard to understand what the minimum requirements for depositing data are
- Missing information about how a new curator gets their training
- Some metadata fields are only described in the deposit guide, not the curation guide. A lot of clicking back and forth
- Missing information about preferred file format for some data types
- Missing information about the types of data that we do not accept (data requiring protection)
- Missing explanations about “why” things should be a certain way (important for the curator to know, so this can be clearly communicated to the depositor)
- Unclear what are the curator’s tasks in connection with long-term preservation
- Information about anonymization / double blind peer-review is fragmented (should be collected in one logical place)

3. Content Requirements

3.1 Core Content Types

The platform should support:

Content type	Description	Requirements
Repository guides	Deposit, curation, management guides	Structured documentation
Information pages	About DataverseNO, contact information, possibly a FAQ-page	Flexible pages
News/blog	Announcements and updates	Archive and categorization

3.2 Content Characteristics

Requirements:

- Structured documentation
 - Long-form content support
 - Frequent updates (e.g. to the guides, but potentially also news once a week?)
 - Cross-linking between guides
 - Reusable content components
 - Last updated stamp
 - Version/change tracking
 - Embedded content (e.g. videos)
 - User feedback on website
-

4. Information Architecture (IA)

4.1 Proposed Structure

(work in progress)

Home

|

|— About DataverseNO

- | |— What is DataverseNO?
 - | |— Who can use DataverseNO?
 - | |— Why use DataverseNO?
 - |
 - |— Deposit guidelines
 - | |— Prepare your data
 - | |— Deposit and publish your data (+ versioning?)
 - | |— Refer to your data (+ versioning?)
 - |
 - |— Curation guidelines
 - | |— Curation of datasets:
 - | | |— Metadata
 - | | |— Files
 - | | |— Terms
 - | | |— Return dataset to author
 - | | |— Publish dataset
 - | |— Other curation tasks
 - |
 - |— Collection management guidelines
 - |
 - |— Repository management guidelines
 - |

 - |
 - |— Contact
-

4.2 Navigation Requirements

The website should support:

- Clear hierarchical navigation
 - Sidebar breadcrumb navigation
 - Possibly tagging/categories
 - Internal linking between documentation pages
 - Heading URLs
 - Return-to-the-top-of-the-page-navigation
-

5. Functional Requirements

5.1 Search and Discovery

Required functionality:

- Site-wide search
 - Advanced search page
 - Filtering by topic/user group
 - Search result highlighting
-

5.2 Guide Functionality

Guide pages should support:

- Structured sections
 - Table of contents
 - Step-by-step workflows
 - Images, boxes and diagrams
 - Links to external resources
 - Links can be configured to open in new tab or on new page
 - Last-updated information
 - Print/export as PDF functionality
-

5.3 Page Templates

Guide Page Template

Required elements:

- Title
 - Introduction/summary
 - Table-of-content-boxes
 - Keep-in-mind boxes
 - Main content
 - Last updated date
-

Landing Page Template

Required elements:

- Overview information:
 - Clear entry points for main user groups / Highlighted guides
 - Quick links to other useful resources (inspiration from KU Leuven [Support & guidelines — RDR - Research Data Repository](#)):
 - Contact page
 - The repository website (dataverse.no)

 - Read-me file template?
 - Preferred file formats list?
 - License overview?
 - Metadata overview?
 - FAQ?
 - Demo videos?
 - Quickguide checklist?
 -
-

News Page Template

Required elements:

- News listing
 - Individual article view
 - Categories/tags
 - Archive
-

6. Multilingual Requirements

- Languages:
 - Norwegian
 - English
- Requirements:

- Language switcher (buttons as flags or text)
 - Separate language versions
 - Clear relationship between translations
 - Translation workflow
 - Handling of missing translations
 - Search support across languages
-

7. Editorial and Content Management Requirements

7.1 Editorial Roles

Expected roles:

Role	Responsibilities
Editor	Creates and updates content
Reviewer	Reviews content (optional)
Publisher	Approves publication (optional)

7.2 Workflow

Expected workflow:

Draft

↓

Review (optional)

↓

Translation (if needed)

↓

Publish

Requirements:

Draft mode
Preview before publishing
Version history

Permissions/roles
Content approval workflow

8. Layout and UX Requirements

8.1 Design Principles

The website should be:

- Clean
 - Documentation-focused
 - Easy to navigate
 - Professional/academic
 - Consistent with DataverseNO identity (i.e. the new graphical profile)
-

8.2 Responsive Design

Support:

- Desktop (primary)
 - Tablet (secondary)
 - Mobile (secondary)
-

9. Accessibility Requirements

The website should meet:

- WCAG (Web Content Accessibility Guidelines) 2.1 AA or higher ([Websites | Tilsynet for universell utforming av ikt](#)), including:
 - Keyboard accessibility
 - Screen reader compatibility
 - Accessible headings
 - Accessible images
 - Clear language/readability

10. Technical Requirements

10.1 Platform Requirements

The selected platform should support:

- CMS or equivalent content management system
 - Easy editing by non-developers
 - Structured content
 - Multilingual support
 - Good documentation / active community / open-source
 - Sustainable maintenance
 - Customization options
 - AI-assisted development
-

10.2 Hosting Requirements

Preferred hosting:

Institutional hosting or cloud hosting

10.3 Performance Requirements

The website should provide:

- Fast loading times
 - Optimized media
 - Good performance with large documentation volumes
 - High availability/reliability
-

11. Integration Requirements

Potential integrations:

System	Purpose	Requirement
LinkedIn	Embedded content?	
Authentication	Control editing access	Should be an integrated part of the platform
Analytics	Usage monitoring	Should offer integration with Matomo.

12. AI-Assisted Development and Maintenance

The redesign will be supported by AI.

Potential uses:

- Content restructuring
 - Metadata/tag suggestions
 - Translation assistance
 - Content consistency checks
 - Code/template generation
-

13. Constraints and Assumptions

Known constraints:

- Existing content largely available
 - Internal team maintains website
 - Limited development resources
 - Preference for manageable technical complexity
-

14. Platform Evaluation Criteria

Use this section when comparing possible platforms.

Criterion	Importance	Notes
Ease of content editing	High	
Multilingual support	High	
Documentation/content structure	High	Important for sustainable maintenance
Search functionality	High	
Accessibility	High	
Customization flexibility	Medium	
Maintenance effort	High	Low future maintenance prioritised
AI compatibility	Medium	
Hosting requirements	Medium	
Cost	Medium	
Integration possibilities	Medium	Would be good to be able to repost news here, e.g. from LinkedIn, but see environmental requirements.
Navigation functionality	High	Consistent sidebar breadcrumb
User feedback possibilities	Medium	
Environmental requirements	High	E.g. Limited page weight (https://sikt.no/aktuelt/slanketips-nettsider), limited analytics, few animations/images (and correct compression), no autoplay videos, reduce external scripts, social media widgets, renewable-powered hosting(?), use a Content Delivery Network (CND) to reduce travel distance for data.

15. Future Considerations

Possible future requirements:

- Interactive guides/wizards

- Decision trees
 - API-based content reuse
 - Semantic/AI-powered search
 - Additional languages (e.g. Norwegian nynorsk and bokmål, Northern Sami ...)
-

16. Open Questions

1. Do any sections require restricted access/authentication? No
2. How much customization is needed versus using standard CMS features? No/Moderate
3. How complex should translation workflows be? Not too complex
4. What level of version history/change tracking is required? Not sure
5. Which content types should be reusable across pages? Not sure
6. How much AI assistance should be integrated into editorial workflows? Moderate
